

Victor Teluffs Electrisher Rechenblock

Electrischer Rechenblock is a textbased Calculation-System.

You can enter your Calculation into the left column, using one of the following operators:

- Addition: +
- Subtraction: -
- Multiplication: * x à
- Division: /
- Brackets: ()

Make sure you have a space left and right to your operator in order to let Electrisher Rechenblock distinguish between Calculation and Textinformation.

In the second column you can use one of the following:

- = write the result of your calculation
- **Sum** calculate the Sum of all calculations above

Example:

The screenshot shows the 'Electrischer Rechenblock' application window. The main area contains a table with 20 rows and 3 columns: 'Calculation', '=/Sum', and 'Result'. The first three rows contain calculations: '10 Persons á 4 days x 250,-', '4 tickets x 2 persons á 150,- EUR', and '3 days hotel x 120,- EUR'. The 'Result' column shows the calculated values: 10.000,00, 1.200,00, and 360,00. The 'Sum' button is used to calculate the total of the first three rows, resulting in 11.200,00. The 'Total' sidebar on the right shows the current total of 11.720,00, with a discount of 20,00% and a plus of 16,00% applied, resulting in a final total of 10.876,16. The status bar at the bottom shows the current calculation: '1:1 Calculation (ie. 2 Nights x 4 Persons x 40,00 EUR)'.

	Calculation	=/Sum	Result
1	10 Persons á 4 days x 250,-	=	10.000,00
2	4 tickets x 2 persons á 150,- EUR	=	1.200,00
3		Sum	11.200,00
4			
5	3 days hotel x 120,- EUR	=	360,00
6			
7	4 meals x 40,- EUR	=	160,00

Total 10.876,16

(Ctrl + Tab to switch)

1:1 Calculation (ie. 2 Nights x 4 Persons x 40,00 EUR)

Electrischer Rechenblock

On the right hand side you can calculate a discount or a VAT to get your Total.

CAUTION:

Make sure Rechenblock can interpret your calculation and can distinguish between Operators and text, otherwise you will get wrong results.
